Amara Okonkwo

Junior Software Engineer & Freelance Developer

London · amara03@live.co.uk · 07412 092464 · https://konkz7.github.io/portfolio/ · https://github.com/Konkz7

Junior Software Engineer with a strong foundation in backend development using .NET and Spring Boot, built through industry experience at KPMG and IBM. Currently combine part-time freelance software development for independent clients with continued technical growth, having recently completed an intensive software engineering bootcamp with Northcoders. Proven ability to learn new technologies quickly, ship production-ready features, and communicate effectively with clients and stakeholders.

Technical Skills

Languages: Java, C#, Python, JavaScript/TypeScript, SQL
Frameworks: Spring Boot, .NET, ASP.NET MVC, Blazor, React, React Native, Flutter
Databases: PostgreSQL, SQL Server, Firebase (Firestore, Realtime DB)
Tools: Git, Docker, Postman, AWS, Firebase, Visual Studio, IntelliJ
Concepts: OOP, REST APIs, System Design, Async Programming, Design Patterns
Testing: Test Driven Development, NUnit, JUnit, Moq, CI/CD, Agile

Experience

Self-Employed, Remote
Freelance Software Developer Aug 2026 – Present

- Design and build bespoke web and mobile applications for independent clients, owning projects end-to-end from requirements gathering through deployment.
- Deliver full-stack solutions using .NET, Spring Boot, and React, selecting technology and architecture to fit each client's budget and goals.
- Manage client relationships directly, including scoping, quoting, and post-launch support, developing commercial and stakeholder-communication skills.

Northcoders, London
Software Engineering Bootcamp Mar 2026 – Jul 2026

- Completed an intensive C# software development course covering object-oriented programming, RESTful APIs, and test-driven development.
- Built backend applications using .NET, focusing on clean architecture, dependency injection, and scalable design patterns.
- Applied Agile methodologies, including pair programming, code reviews, and sprint-based delivery.

KPMG, Lagos
Intern Software Developer Nov 2024 – Apr 2025

- Developed, integrated and tested a real-time voice-calling system using Agora SDK, OneSignal, Flutter, .NET, and Firebase—successfully deployed across KPMG internal tools.
- Adapted rapidly to new technologies (Dart, Flutter), delivering production-ready features to a mobile app with 1,000+ active users within 3 weeks.
- Participated in client-facing meetings, live demos, and stakeholder updates—communicating technical progress and integration roadmaps.

IBM, Nottingham
Student Software Engineer Sep 2022 – May 2023

- Delivered a formal proposal presentation to IBM, securing collaboration ahead of 56 competing teams in a university-wide competition.
- Developed interactive educational tools using Unity and C#, simulating key AI and software concepts for student use.
- Leveraged IBM Cloud for backend storage and analytics, including IBM Watson for natural language insights on user interaction data.

Projects

Flowstate – Productivity & Accountability App *Blazor, C#, .NET*

- Joined an existing team and built out a large part of a Blazor app for planning work and staying accountable to it, delivering feature work in an unfamiliar codebase ticket by ticket, each reviewed and merged.
- Built the task model and data layer, plus the dashboard and task list.
- Implemented an Eisenhower prioritisation matrix, and full CRUD for focus sessions including invites.

Imposter – Offline Party Games App *Unity, C#*

`https://github.com/Konkz7/Imposter`

- Built five offline pass-the-phone multiplayer party games (3–12 players per session) for Android and iOS in Unity and C#, with no accounts or networking.
- Designed a data-driven content pipeline using ScriptableObjects generated from C# seed data with an automated validator, and wrote editor tooling to automate project setup, Android/iOS builds and a release-readiness checklist.
- Wrote EditMode and PlayMode test suites covering game rules, core services and full app flow, including automated store screenshot capture.

BetSocial – Social Betting App *Spring Boot, React Native, PostgreSQL*

`https://github.com/Konkz7/BetSocial`

- Built a decentralised social media platform allowing users to create and engage in peer-driven bets across social events.

Chess Autonomous Agent *Java*

`https://github.com/Konkz7/Chess-Engine`

- Designed a lightweight chess AI using a custom evaluation function and optimized move-tree search for efficiency on limited hardware.

Other Experience

Showsec: SIA Door Supervisor / Event Steward, London *Part-time, May 2025 – Present*

- Manage safety, security, and conflict resolution at large-scale events, staying reliable and professional under pressure.

Education

University of Nottingham, Nottingham Sep 2021 – Jul 2024
BSc Computer Science with Artificial Intelligence (2:1)
Relevant Modules: Machine Learning, Algorithms & Data Structures, Databases, Software Engineering
Mill Hill County High School, London Sep 2019 – Jul 2021
A-Levels: Computer Science (A), Mathematics (A), Chemistry (A)

Interests

Brazilian Jiu-Jitsu: Competed at national level, achieving podium finishes.
Football: Active player and avid follower, with a strong interest in team dynamics and strategy.
Hiking & Scrambling: Completed challenging UK routes including Tryfan and Scafell Pike.
